Degeneracy
Entanglement
Compilation
Operational resources
(A)
band / surface crossing
near-degeneracy / curvature source
entanglement generation
(B)
Structured entanglement manifold
full Hilbert space
EDT manifold
loop-stabilized interference
(C)
degeneracy / curvature input (NACT, band crossings, phonons)
Schur sectors
CG coupling
AM-TTN / circuit
physics → symmetry → architecture
(D)
unstructured computation
EDT-guided computation
Hilbert-space compression
uniform search / broad pathway load
task-relevant pathway concentration
(E)
uniform sampling
EDT-aligned sampling
restricted operator sector
full operator space
(F)
external field
selective response
NV
coherence + signal localization
