Independent XY8 data reveal spurious resonant regions
A Vector-digitized experimental segments
128 pulses
256 pulses
352 pulses
400 pulses
512 pulses
Transition probability
Detection frequency (MHz)
B Harmonic regions emerge as the threshold expands
Second and fourth harmonics enter
at 61% allowed loss
Disconnected spectral regions, $\beta_0$
Allowed loss from strongest response (%)
Each acquisition segment is baseline-corrected; one global normalization is used. Published simulations are excluded. No frequency shift or fitting.
